Chicago Booth will enable me to recognize innovation and
use technology more effectively

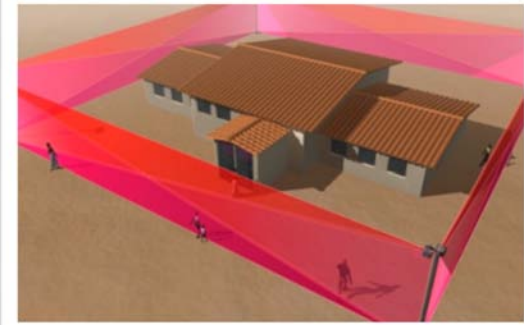

Technology: Professional

Security technology is vital to the protection of commerce in developing nations and the success of their economic growth.

↓ GPS tracking combined with fleet management software could enable entrepreneurs to track their assets in the field.

↑ Smart Fences could allow businesses to protect goods as well as clients.

Empress Market, Karachi

← Night vision with thermal overlay could help businesses surveil their properties at night.

Technology: Community

As a member of the Earned Income Tax Credit (EITC) Project, I prepare tax returns for low income families.

-The program's reach is limited.

↓ The Application of video conferencing technology could allow volunteers from any location in the world to help those in need of services.

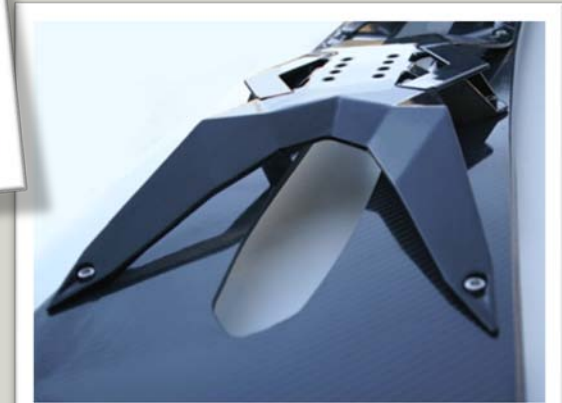

Technology: Personal

The critical foundation developed at Booth will enable me to use technology not only to benefit my industry and community, but also to benefit a personal and recreational passion.

- ↓ Heads-Up Displays inside goggles show speed, temperature and even caller ID.

- ↓ New Carbon Fiber snowboards combined with innovative suspension systems allow for incredible precision and speed on the race course or in the backcountry.

- ← Avalanche rescue technology allows teams to find victims quickly, minimizing casualties.
